

Governance. Risk. Compliance. Unified by Intelligence

The Healthcare GRC Challenge

Healthcare organizations operate at the intersection of patient safety, data privacy, and regulatory compliance. A multi facility health system simultaneously manages obligations across HIPAA (Privacy Rule, Security Rule, Breach Notification Rule), JCI (Joint Commission International) accreditation requirements, FDA regulations for life sciences, state privacy laws, and CMS Conditions of Participation.

The challenge is compounded by the healthcare IT environment, which includes electronic health records, clinical devices (IoT/IoMT), telehealth platforms, imaging systems, patient portals, and extensive third party vendor ecosystems, all creating a broad attack surface that must be governed, monitored, and documented.

Platform Overview

CompliVerse AI is an enterprise grade, AI native GRC platform that unifies audit management, compliance tracking, enterprise risk management, vulnerability management, IT asset governance, and evidence management into a single, multi tenant platform.

Healthcare Specific Capabilities

HIPAA JCI Unified Control Mapping

Upload HIPAA safeguards and JCI accreditation standards. The CompliVerse AI engine automatically identifies overlapping requirements across both frameworks, creating unified control groups. One evidence artifact satisfies both HIPAA and JCI requirements simultaneously, dramatically reducing the burden of dual compliance programs.

Healthcare Impact: Organizations managing both HIPAA and JCI typically identify 200 or more cross framework control relationships automatically, eliminating duplicate evidence collection and reducing certification preparation by 60 to 70 percent.

Evidence Vault for Continuous Accreditation Readiness

Centralize all compliance evidence, including access reviews, security configurations, training records, incident response documentation, risk assessments, and policy acknowledgments, in a single vault with version control and approval workflows. When the JCI surveyor or HIPAA auditor arrives, evidence is organized, current, and traceable to specific controls.

Healthcare Impact: Evidence retrieval time drops from 2 to 4 hours per request to under 5 minutes. Continuous readiness replaces seasonal scrambles.

Clinical IT Asset Governance

Manage the full healthcare IT asset inventory, including EHR systems, clinical devices, cloud services, and third party vendors. CIA triad ratings are critical in healthcare where patient data confidentiality and system availability directly impact care delivery.

CONFIDENTIAL

Healthcare Impact: Assets with current risk assessments increase from 30 to 40 percent to over 85 percent. Assessment aging analysis identifies which clinical systems have not been reviewed recently.

Vulnerability Management with Compensating Controls

Track vulnerabilities across the healthcare IT environment with SLA based remediation timelines. For medical devices and legacy clinical systems where patching is not immediately possible, document compensating controls and risk acceptance decisions, all linked to the relevant HIPAA safeguards and JCI requirements.

Department Level Compliance Coordination

Healthcare compliance requires coordination across clinical departments, IT, human resources, facilities, legal, and administration. CompliVerse AI role based access and department level assignment ensure the right people see the right obligations and evidence requirements.

Audit Management for Healthcare Internal Audit

Full audit lifecycle management for healthcare specific engagements, such as HIPAA security risk assessments, clinical department reviews, IT general controls testing, and vendor management audits. AI powered prior audit cross referencing identifies recurring compliance gaps that require systemic remediation.

Enterprise Risk Management

Interactive risk heat maps covering clinical, operational, IT, and regulatory risk categories. Department level risk ownership ensures clinical leaders, IT directors, and compliance officers are accountable for their risk domains.

Healthcare Compliance Frameworks Supported

Framework	Coverage
HIPAA Privacy Rule	Full safeguard tracking with evidence mapping
HIPAA Security Rule	Administrative, physical, and technical safeguards
HIPAA Breach Notification Rule	Incident documentation and notification tracking
JCI Accreditation Standards	Full standard upload and control mapping
FDA 21 CFR Part 11	Electronic records and signatures (life sciences)
HITECH Act	Enforcement and breach notification
CMS Conditions of Participation	Medicare and Medicaid compliance
HITRUST CSF	Full framework with HIPAA cross mapping
State Privacy Laws	Upload and map state specific requirements
ISO 27001	Information security management overlay

Key Metrics for Healthcare

Metric	Impact
JCI and HIPAA evidence preparation time	60 to 70 percent reduction
Controls with evidence coverage	From 60 to 70 percent to 90 percent plus
IT assets with current assessments	From 30 to 40 percent to 85 percent plus
Evidence retrieval time (per request)	From 2 to 4 hours to under 5 minutes
Cross framework evidence duplication	Eliminated via unified mapping

Getting Started

1. **Discovery Call**, Assess your current compliance landscape across HIPAA, JCI, and other frameworks
2. **Framework Upload**, Import HIPAA safeguards, JCI standards, and applicable regulations
3. **Asset Import**, Bulk import IT asset inventory with CIA ratings via CSV
4. **Evidence Migration**, Migrate existing evidence library into the unified vault
5. **AI Analysis**, Run cross framework mapping and identify coverage gaps

Typical time to first value: **3 to 5 weeks**
