

CompliVerse AI

GRC Platform

CompliVerse helps enterprises design governance, manage risk, and execute compliance at scale through AI-assisted workflows, structured controls, and executive-ready reporting.

Platform Introduction

The platform replaces fragmented GRC operations with a single integrated operating model. It connects policy design, risk assessment, and reporting in one system to reduce cycle times, improve audit readiness, and increase visibility.

Who This Serves

Built for executive leadership, compliance officers, and control owners who need fast decision support, clear accountability, and provable regulatory outcomes across multiple frameworks.

MODULE SUMMARY

Governance Module

Policy lifecycle management, attestations, exceptions, and board oversight across 10 enterprise governance capabilities.

Risk Management Module

AI-supported risk identification, scoring, treatment, scenarios, and integration workflows across 10 operational capabilities.

Compliance Module

Framework ingestion, control mapping, evidence orchestration, and regulator-ready reporting across 10 compliance capabilities.

Module 1 – AI Governance

01. AI Policy Drafting and Generation

1. OVERVIEW

Creates framework-aligned policy drafts in minutes.

2. KEY CAPABILITIES

- Generates policy, procedure, and standard formats.
- Maps language to selected controls and scope.
- Produces metadata and review effort estimates.

3. USE CASE

A bank launching PCI-DSS can generate priority policies in one day and move straight to review.

4. BUSINESS VALUE

- Shortens drafting cycles by up to 80%.
- Reduces consulting dependence and improves consistency.

02. AI Policy Suggestion Engine

1. OVERVIEW

Identifies required policy documents and ranks them by urgency.

2. KEY CAPABILITIES

- Builds a prioritized policy roadmap.
- Links each document to relevant controls.
- Recommends key sections for audit readiness.

3. USE CASE

A newly regulated fintech gets a complete document list within minutes.

4. BUSINESS VALUE

- Prevents missing-policy findings during audits.
- Accelerates initial compliance setup.

03. AI Policy Gap Analysis

1. OVERVIEW

Compares existing policies against target regulations.

2. KEY CAPABILITIES

- Classifies requirements as compliant, partial, or missing.
- Extracts evidence quotes directly from source text.
- Assigns severity ratings with corrective actions.

3. USE CASE

An investment bank moving from ISO to DORA gets a prioritized remediation list in one review.

4. BUSINESS VALUE

- Compresses assessments into hours.
- Improves board visibility of real exposure.

04. AI Regulatory Change Impact Assessment

1. OVERVIEW

Evaluates how new circulars or standards affect policies and controls.

2. KEY CAPABILITIES

- Detects impacted documents, controls, and frameworks.
- Categorizes change type and urgency.
- Highlights missing clauses from updated requirements.

3. USE CASE

When outsourcing guidance changes, the team sees impacted third- party and cloud policies quickly.

4. BUSINESS VALUE

- Reduces response time from weeks to days.
- Minimizes risk from delayed interpretation.

05. AI Governance Dashboard and Executive Insights

1. OVERVIEW

Converts governance signals into executive insights for reporting.

2. KEY CAPABILITIES

- Tracks acknowledgments, exceptions, and overdue actions.
- Flags anomalies and emerging issues automatically.
- Summarizes risk and remediation progress clearly.

3. USE CASE

Before committee review, leaders open one dashboard instead of requesting multiple reports.

4. BUSINESS VALUE

- Enables intervention before findings escalate.
- Improves decisions with a current governance view.

06. AI Document Parsing and Statement Extraction

1. OVERVIEW

Parses governance documents into traceable policy statements.

2. KEY CAPABILITIES

- Uses OCR and NLP to extract policy requirements.
- Differentiates mandatory obligations from guidance.
- Detects duplicates and preserves version snapshots.

3. USE CASE

During post-merger integration, two policy libraries are consolidated into one inventory.

4. BUSINESS VALUE

- Cuts inventory and harmonization effort by months.
- Improves traceability for audits.

07. AI-Powered Attestation and Acknowledgment Management

1. OVERVIEW

Runs attestation campaigns with analytics, reminders, and trails.

2. KEY CAPABILITIES

- Monitors status by user, team, and branch in real time.
- Detects unusual completion patterns.
- Captures timestamped acknowledgments for evidence.

3. USE CASE

A compliance team reaches near-full completion for an AML policy update while targeting low-performing locations.

4. BUSINESS VALUE

- Eliminates manual follow-up overhead.
- Provides regulator-ready proof of acceptance.

08. AI-Enhanced Policy Exception Management

1. OVERVIEW

Formalizes policy deviations through risk-scored workflows.

2. KEY CAPABILITIES

- Applies structured draft-to-approval exception workflows.
- Tracks compensating controls, comments, and ownership.
- Automates expiry alerts and revocation timelines.

3. USE CASE

A temporary control bypass is approved with conditions and revoked automatically when migration ends.

4. BUSINESS VALUE

- Prevents undocumented exceptions and drift.
- Strengthens audit defensibility.

09. AI Committee and Board Governance Oversight

1. OVERVIEW

Supports committee operations by turning meetings into tracked actions.

2. KEY CAPABILITIES

- Summarizes minutes and extracts action items.
- Assigns owners and deadlines.
- Tracks attendance, agendas, and escalations.

3. USE CASE

An audit committee tracks action closure and escalates overdue items before the next session.

4. BUSINESS VALUE

- Improves execution discipline for board decisions.
- Creates a clear accountability record.

10. AI Compliance-by-Framework Reporting

1. OVERVIEW

Provides cross-framework posture reporting with remediation guidance.

2. KEY CAPABILITIES

- Aggregates scores, gaps, and accepted risk by framework.
- Prioritizes remediation by severity and pressure.
- Produces executive-ready exports for oversight forums.

3. USE CASE

A CISO compares SAMA, PCI-DSS, and ISO posture in one view and sets remediation order.

4. BUSINESS VALUE

- Focuses budget on highest-impact gaps.
- Delivers clear reporting to boards and regulators.

Module 2 – AI Risk Management

01. AI Risk Suggestion Engine

1. OVERVIEW

Turns short risk statements into complete records for consistent capture across teams.

2. KEY CAPABILITIES

- Suggests category, impact, likelihood, and treatment path.
- Produces structured narratives with clear control suggestions.
- Standardizes risk language across analyst levels.

3. USE CASE

Analysts document third-party weaknesses in minutes with scoring and a response.

4. BUSINESS VALUE

- Speeds risk intake into the register.
- Improves consistency and record quality.

02. AI Risk Treatment Plan Generation

1. OVERVIEW

Converts identified risks into practical treatment options with clear implementation guidance.

2. KEY CAPABILITIES

- Produces multiple treatment paths for each risk scenario.
- Outlines timelines, control options, and likely impact.
- Supports avoid, mitigate, transfer, or accept decisions.

3. USE CASE

Risk owners compare three strategies for non-compliance and pick the best fit.

4. BUSINESS VALUE

- Turns risk findings into executable plans.
- Improves treatment speed and ownership.

03. AI-Powered Risk Assessment Scoring

1. OVERVIEW

Pre-populates assessment outcomes to reduce manual scoring effort and improve scoring integrity.

2. KEY CAPABILITIES

- Suggests inherent and residual scoring with rationale.
- Rates control effectiveness and treatment status.
- Supports high-volume annual and quarterly assessments.

3. USE CASE

A 150-risk annual assessment is completed in days rather than weeks using AI-assisted pre-scoring.

4. BUSINESS VALUE

- Cuts assessment cycle time by up to 75%.
- Improves comparability of scores across business units.

04. AI Risk Appetite and KRI Threshold Suggestions

1. OVERVIEW

Recommends defensible appetite statements and threshold levels based on organizational context.

2. KEY CAPABILITIES

- Suggests benchmarked limits for major risk categories.
- Defines early-warning and breach thresholds for KRIs.
- Supports board calibration with documented rationale.

3. USE CASE

A tier-2 bank establishes first-year appetite and KRI thresholds with data-backed starting points.

4. BUSINESS VALUE

- Reduces arbitrary threshold setting.
- Strengthens governance credibility with regulators and boards.

05. AI RCSA Evidence Recommendations

1. OVERVIEW

Advises which evidence artifacts should be attached to each RCSA question for better control assurance.

2. KEY CAPABILITIES

- Generates question-specific evidence checklists.
- Provides sample file naming and document types.
- Flags likely evidence gaps before review submission.

3. USE CASE

Treasury teams receive targeted evidence requests and complete quarterly self-assessment with fewer rework cycles.

4. BUSINESS VALUE

- Improves assessment completeness and audit quality.
- Reduces review delays caused by weak documentation.

06. AI-Powered Bow-Tie Analysis

1. OVERVIEW

Builds clear cause-event-consequence chains so leaders can understand preventive and recovery control coverage.

2. KEY CAPABILITIES

- Maps threats, vulnerabilities, central event, and outcomes.
- Associates preventive and recovery controls to each stage.
- Highlights weak or missing controls in the chain.

3. USE CASE

Cyber leadership models ransomware impact and quickly prioritizes control upgrades for high-risk failure points.

4. BUSINESS VALUE

- Improves risk communication with non-technical executives.
- Supports smarter investment in control strengthening.

07. AI Scenario Analysis and What-If Modeling

1. OVERVIEW

Tests alternative risk scenarios and translates impact into plain business language for executive decisions.

2. KEY CAPABILITIES

- Runs parameter-based impact simulations.
- Compares before-and-after outcomes by scenario.
- Summarizes operational, financial, and regulatory implications.

3. USE CASE

Leadership evaluates the loss of a critical correspondent banking relationship and prepares contingency actions.

4. BUSINESS VALUE

- Supports data-driven risk committee discussions.
- Improves readiness for low-frequency high-impact events.

08. AI Mitigation Action Generation

1. OVERVIEW

Generates costed mitigation options that can be prioritized and assigned immediately.

2. KEY CAPABILITIES

- Provides multiple action paths with expected risk reduction.
- Suggests implementation windows and ownership model.
- Supports downstream tracking of execution status.

3. USE CASE

Fraud risk owners compare low-cost and high-impact options before finalizing a phased mitigation program.

4. BUSINESS VALUE

- Links risk decisions directly to practical execution plans.
- Improves return on risk mitigation spend.

09. Excel Risk Register Upload with AI Mapping

1. OVERVIEW

Imports legacy risk registers in bulk with smart field mapping and score preservation.

2. KEY CAPABILITIES

- Detects column structure automatically from spreadsheets.
- Maps likelihood, impact, owners, and status fields.
- Creates linked records for ongoing assessment workflows.

3. USE CASE

Post-merger integration teams migrate hundreds of historical risks without manual re-entry.

4. BUSINESS VALUE

- Protects institutional risk history during system transitions.
- Saves significant analyst effort and migration time.

10. Accepted Risk to Risk Register Integration

1. OVERVIEW

Converts accepted compliance gaps into structured risk records with full traceability.

2. KEY CAPABILITIES

- Automatically generates risk entries from accepted findings.
- Maps severity into scoring and treatment suggestions.
- Maintains bi-directional links between gap and risk records.

3. USE CASE

Compliance teams accept a non-critical control gap and hand it to risk with preserved evidence and ownership.

4. BUSINESS VALUE

- Prevents handoff failures between compliance and risk functions.
- Strengthens traceability for internal and external assurance reviews.

Module 3 – AI Compliance

01. AI Framework Document Ingestion (3-Pass Extraction)

1. OVERVIEW

Ingests regulatory documents and converts them into structured controls ready for assessment and reporting.

2. KEY CAPABILITIES

- Runs structure detection, control extraction, and validation passes.
- Preserves original control IDs and hierarchy.
- Detects duplicates and overlapping requirements.

3. USE CASE

A newly issued 180-page standard is transformed into actionable controls in one operating day.

4. BUSINESS VALUE

- Reduces framework onboarding from weeks to hours.
- Improves consistency of downstream control mapping.

02. AI Cross-Framework Control Mapping and Similarity Analysis

1. OVERVIEW

Identifies equivalent controls across frameworks to support implement-once, comply-many operations.

2. KEY CAPABILITIES

- Calculates semantic similarity between controls.
- Builds normalized controls linked to multiple obligations.
- Supports harmonized evidence strategy across standards.

3. USE CASE

A regulated bank maps SAMA, PCI-DSS, ISO, and SWIFT controls and cuts duplicate compliance activity.

4. BUSINESS VALUE

- Reduces repetitive compliance workload by 40-60%.
- Lowers audit preparation effort across concurrent frameworks.

03. AI Compliance Assessment Parsing

1. OVERVIEW

Imports external checklists and assessment files while preserving status and structure.

2. KEY CAPABILITIES

- Auto-detects worksheet format and column mapping.
- Maintains assessor notes, evidence links, and status fields.
- Connects imported rows to framework control libraries.

3. USE CASE

An auditor checklist with hundreds of items is imported in one step and tracked inside the platform.

4. BUSINESS VALUE

- Eliminates duplicate data entry between tools.
- Accelerates remediation mobilization after assessments.

04. AI Evidence Assessment and Matching

1. OVERVIEW

Evaluates uploaded evidence quality and maps artifacts to relevant controls across frameworks.

2. KEY CAPABILITIES

- Scores explicit, implicit, and inferred evidence fit.
- Assigns quality ratings and highlights missing proof points.
- Detects where one artifact satisfies multiple obligations.

3. USE CASE

A penetration test report is matched to PCI, ISO, and SAMA requirements with identified evidence gaps.

4. BUSINESS VALUE

- Improves first-pass evidence acceptance rate.
- Reduces duplicate evidence collection across audits.

05. AI Evidence Requirements Generation

1. OVERVIEW

Provides exact evidence requirements for each control so teams know what to collect before audits.

2. KEY CAPABILITIES

- Defines expected artifact types and content requirements.
- Suggests sample filenames and submission standards.
- Supports reviewer-ready packaging workflows.

3. USE CASE

Control owners receive control-specific evidence checklists for PCI logging controls before QSA review.

4. BUSINESS VALUE

- Prevents late-stage evidence surprises.
- Improves audit readiness and review cycle speed.

06. AI Compliance Gap Prioritization

1. OVERVIEW

Ranks compliance gaps by impact, urgency, and remediation complexity so teams focus on what matters first.

2. KEY CAPABILITIES

- Prioritizes by severity, deadlines, and penalty exposure.
- Estimates remediation effort for planning decisions.
- Generates ordered action queues for leadership governance.

3. USE CASE

After assessment, critical controls due before regulatory examinations are elevated above lower-risk documentation gaps.

4. BUSINESS VALUE

- Improves allocation of limited remediation capacity.
- Reduces probability of high-impact regulatory findings.

07. Multi-Tier Evidence Approval Workflow

1. OVERVIEW

Enforces structured reviewer chains for evidence approval with complete decision history.

2. KEY CAPABILITIES

- Supports sequential approvals and change requests.
- Tracks timestamps, reviewers, and comments by step.
- Displays pending queues for operational control.

3. USE CASE

Evidence for critical controls moves from technical review to compliance sign-off before external submission.

4. BUSINESS VALUE

- Raises evidence quality through structured governance.
- Creates strong audit trail for assurance teams.

08. Compliance Calendar and Deadline Management

1. OVERVIEW

Centralizes compliance deadlines, recurring tasks, and submission windows across all frameworks.

2. KEY CAPABILITIES

- Tracks recurring and one-time regulatory milestones.
- Supports filters by framework, owner, and event type.
- Triggers overdue alerts and escalation workflows.

3. USE CASE

Compliance leadership manages quarterly scans, annual reports, and committee deadlines in one operational calendar.

4. BUSINESS VALUE

- Prevents missed deadlines and associated penalties.
- Shifts execution from reactive to proactive planning.

09. Comprehensive Compliance Reporting (24 Reports plus Excel Export)

1. OVERVIEW

Delivers standardized multi-module reporting for executive updates and regulator submissions.

2. KEY CAPABILITIES

- Provides pre-built reports across governance, risk, and compliance domains.
- Supports one-click export for formal external reporting.
- Aggregates posture, gaps, evidence, and remediation status.

3. USE CASE

A regulator request is answered in the same day using generated framework and remediation reports.

4. BUSINESS VALUE

- Reduces reporting lead time from days to minutes.
- Improves consistency and defensibility of submitted data.

10. Enriched Executive Dashboard (10 Tabs)

1. OVERVIEW

Provides an executive command center with AI-prioritized insights across the full GRC lifecycle.

2. KEY CAPABILITIES

- Surfaces trends across governance, risk, compliance, and treatment execution.
- Highlights anomalies and emerging risk concentration areas.
- Supports leadership views tailored for committee and C-suite use.

3. USE CASE

Before executive committee meetings, leaders review one dashboard for status, exceptions, and urgent remediation decisions.

4. BUSINESS VALUE

- Improves speed and quality of executive decision-making.
- Creates shared operating picture across control functions.
