The Intelligent *Procurement Engine*

Your procurement process spans dozens of steps, people, and systems. Our platform deploys specialised AI agents at every stage — eliminating delays, errors, and invisible bottlenecks.

What It Is

A multi-agent AI orchestration platform that sits on top of your existing ERP and business processes. It automates repetitive tasks, follows up on stalled approvals, validates documents, and keeps every stakeholder informed — without replacing your systems.

12+

AI Agents

14

Process Steps

5+

ERP Platforms

How It Works

Each AI Agent is trained on your specific procurement rules, approval hierarchies, ERP schema, and vendor relationships. Agents collaborate, escalate intelligently, and hand off work seamlessly — just like a high-performance team would.

100%

Audit Trail

Real-Time

Visibility

Works With Any ERP

SAP, Oracle, Microsoft Dynamics 365, in-house systems, and heavily customised setups. No rip-and-replace. No mandatory standardisation. The platform adapts to your existing environment and processes — not the other way around.

Business Impact

Reduce invoice processing time from days to hours. Eliminate manual follow-ups. Achieve 100% 3-way match discipline. Cut maverick spend. Gain real-time spend analytics and board-ready compliance reports.

70%

Faster Cycles

40%

Cost Reduction

Your Process Is *Quietly Failing You*

Behind the spreadsheets, email chains, and manual approvals lies a costly tangle of delays, errors, and missed controls.

APPROVAL BOTTLENECKS

Approval Bottlenecks

PRs and POs sit in inboxes for days. Approvers are not reminded. Urgent purchases get bypassed through informal channels — creating maverick spend and audit exposure.

↑ 3–7 Day Average Delay

MANUAL QUOTATION

Manual Quotation Comparison

Procurement teams compare vendor quotes in Excel. There is no audit trail, no consistency, and significant room for human error — or worse, subjectivity in vendor selection.

↑ Hours per RFQ Cycle

INVOICE DISPUTES

Invoice Mismatches & Disputes

Invoices don't match POs or GRNs. Finance teams manually investigate each mismatch. Vendors chase payment. Early payment discounts are regularly missed.

↑ 15–30% Invoice Exception Rate

ZERO VISIBILITY

Zero Visibility

No single dashboard shows where every PR, PO, invoice, or payment stands. Management makes decisions based on stale or incomplete information from multiple systems.

↑ Reactive Decision-Making

ERP CHAOS

ERP Customisation Chaos

Every company has customised its ERP differently. Automation tools built for standard processes break down in customised environments and require expensive rework to function.

↑ High Implementation Failure Rate

COMPLIANCE GAPS

Compliance Gaps

Procurement decisions happen outside the system. Approval limits are breached. Preferred vendors are bypassed. Audit trails are incomplete or entirely non-existent.

↑ Audit & Regulatory Risk

AI That *Acts*, Not Just Advises

Traditional AI tells you what to do. Agentic AI does it — autonomously, collaboratively, and within your defined guardrails.

1

Perceive

Agents read your ERP data, emails, documents, and process states in real time — understanding context exactly like a human would.

2

Reason

Each agent applies your business rules, approval policies, and procurement standards to decide the right next action.

3

Act

Agents execute tasks directly: update ERP records, send follow-ups, validate invoices, create POs, flag exceptions — autonomously.

4

Escalate & Learn

When human judgment is needed, agents escalate with full context. They continuously improve based on outcomes and feedback.

WITHOUT AI

- Staff chase approval emails daily
- PO creation waits for manual input
- Invoice matching done in spreadsheets
- Exceptions sit unresolved for days
- Vendors call finance for payment updates
- Reports pulled manually at month end

WITH AGENTIC AI

- ✓ Auto follow-ups with smart escalation
- ✓ POs created instantly on approval
- ✓ 3-way match runs in seconds
- ✓ Exceptions routed with full context
- ✓ Vendors get proactive status updates
- ✓ Real-time dashboards, always current

GOVERNING PRINCIPLE

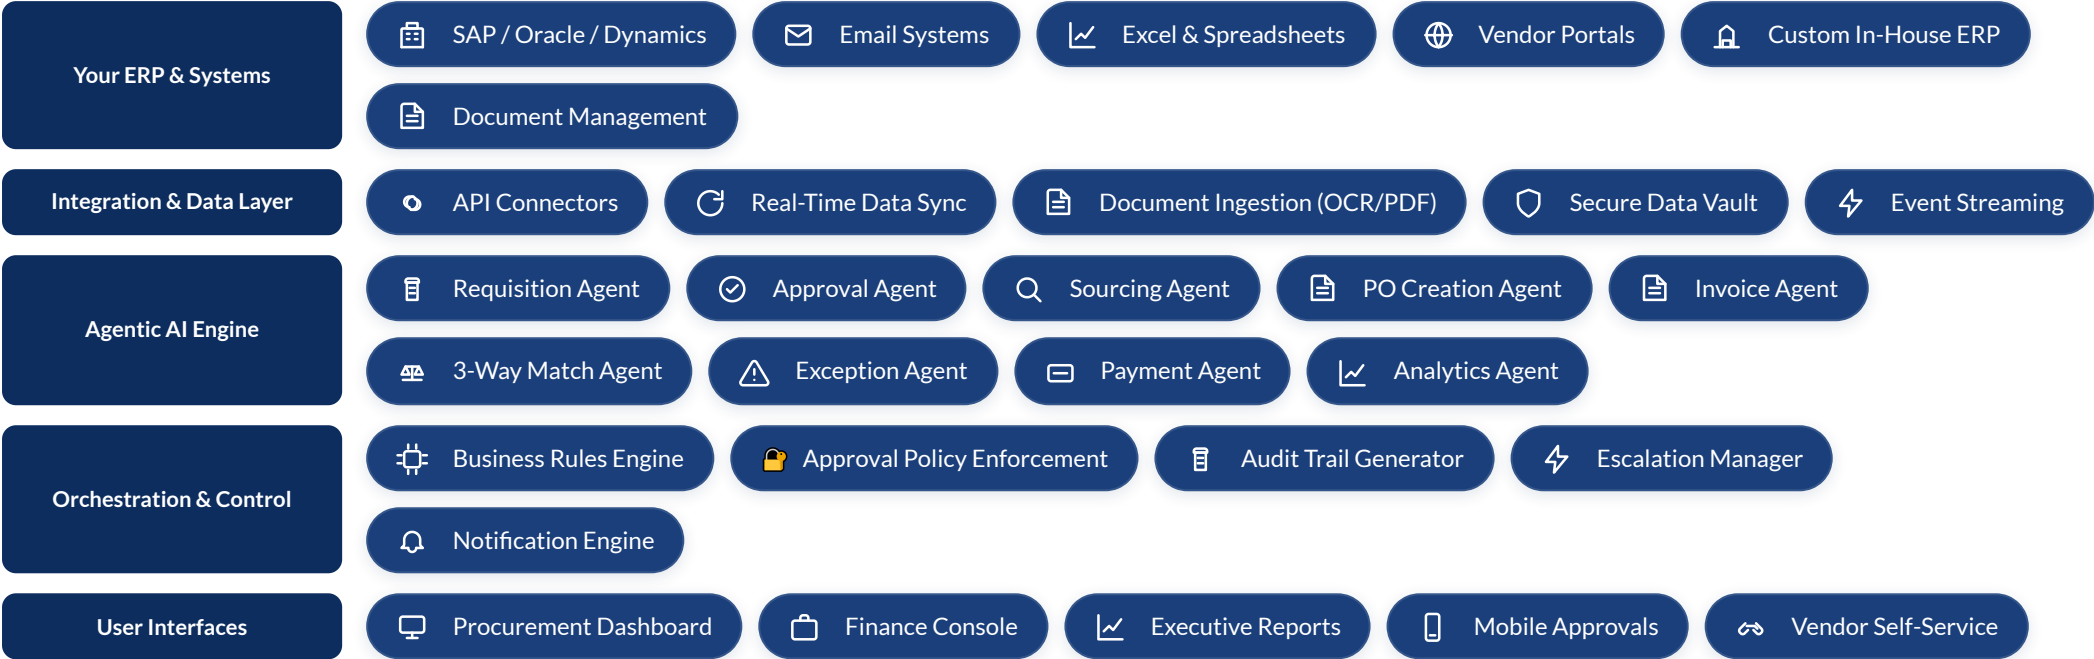

"Humans set the rules. Agents follow them relentlessly — with full transparency and a complete audit trail at every step."

HOW THE PLATFORM IS BUILT

PLATFORM ARCHITECTURE

A Layered Intelligence Platform

Five distinct layers add intelligence, automation, and control to your existing environment — without disrupting anything you already run.

The Complete *P2P Journey*

Phase

Where *AI Agents* Take Over

PROCESS STAGE	TODAY'S PAIN	WHAT THE AI AGENT DOES	RETAINED	OUTCOME
PR Creation	Manual data entry, wrong GL codes, incomplete fields	Reads request, pre-fills ERP fields, suggests GL codes and cost centres	Final submission & review	↓ 80% data entry time
PR Approval	Approvers don't respond for days, urgent PRs delayed	Sends smart reminders, escalates after SLA breach, tracks response	Approval decision	↓ 70% approval delay
Vendor Sourcing	Manually browsing vendor database, inconsistent shortlisting	Searches approved vendor list, scores vendors on price, quality & history	Final vendor selection	↑ 90% faster shortlist
Quotation Comparison	Comparing quotes in Excel, no audit trail, bias risk	Normalises & compares quotes, generates scored comparison matrix	Award decision	↓ 95% comparison effort
PO Creation	Wait for someone to manually create PO after approval	Auto-creates PO in ERP immediately upon PR approval — no delay	PO approval & release	Same-day PO issuance
Invoice Processing	Manual invoice entry, high error rate, lost invoices	Reads invoices via OCR, extracts data, validates fields, logs in ERP	Exception review	↓ 85% manual processing
3-Way Match	Manual cross-check of PO, GRN, and Invoice each time	Runs automated match in seconds across all three documents, line by line	Dispute resolution	100% match coverage
Exception Handling	Exceptions sit unresolved, causing payment delays	Classifies exceptions, routes to right person with full context attached	Resolution decision	↓ 60% resolution time
Payment Processing	Payment approvals bottlenecked, vendors complain	Validates readiness, triggers approval workflow, confirms vendor payment	Final payment authorisation	↑ On-time payment rate

Adapts to Your ERP, Not the Other Way Around

SAP (S/4HANA & ECC)

ENTERPRISE ERP

- › Connects via BAPI, RFC, and OData APIs
- › Works with custom Z-tables and ABAP logic
- › Supports complex approval matrix configurations
- › Reads custom posting rules and tolerance groups

Microsoft Dynamics 365

CLOUD ERP

- › Integrates via Power Platform and Dataverse APIs
- › Handles custom entities and business flows
- › Reads approval rules from custom Power Automate flows
- › Supports both F&O and Business Central variants

Oracle ERP Cloud & Fusion

ENTERPRISE CLOUD ERP

- › REST API and FBDI-based integration
- › Supports Oracle Procurement Cloud workflows
- › Custom flexfields and descriptive segments handled natively
- › Compatible with Oracle iProcurement setups

Legacy & In-House ERP

CUSTOM BUILT SYSTEMS

- › Adapts via database-level connectors or screen reading
- › No changes required to existing system
- › Reads from SQL Server, Oracle DB, MySQL, and more
- › Functions even without formal APIs

Email + Excel Workflows

HYBRID ENVIRONMENTS

- › Reads approval emails and extracts structured decisions
- › Processes Excel quote comparisons automatically
- › Converts ad-hoc email processes into audited workflows
- › Bridges the gap between email and ERP

Vendor Portals & Third-Party

EXTERNAL ECOSYSTEMS

- › Connects to supplier portals via API or RPA
- › Sends and receives POs, invoices, and status updates
- › Manages communication with vendors at scale
- › Tracks vendor acknowledgements automatically

No Rip-and-Replace

Platform layers on top of existing systems

Fast Deployment

Live in weeks, not months

Secure by Design

Role-based access, data encryption, audit logs

Fully Configurable

Business rules tuned to your exact processes

From *Real Problems* to Measured Outcomes

Delayed PR Approvals Driving Urgent Purchases

PAIN POINT

PR sat in manager's inbox for 6 days. Team bought supplies from a local vendor at 40% premium, bypassing procurement policy entirely.

AI SOLUTION

Approval Follow-up Agent sends escalating reminders at 24h, 48h, and auto-escalates to skip-level at 72h with complete context attached.

OUTCOME

Average approval time drops from 6 days to under 18 hours. Zero maverick buys driven by approval delays.

↓ **85% Approval Wait Time**

Vendor Quotation Comparison Done in Excel

PAIN POINT

Procurement officer spent 3 days comparing 8 vendor quotes in Excel. No audit trail. Selection later challenged by internal auditors.

AI SOLUTION

Sourcing Agent collects quotes, normalises formats, applies weighted scoring criteria, and generates a transparent comparison report in minutes.

OUTCOME

Quote evaluation completed in 20 minutes. Full audit trail maintained. 100% defensible to auditors and management.

3 Days → 20 Minutes

Invoice Mismatches Causing Payment Delays

PAIN POINT

30% of invoices fail 3-way match. Finance team spends 2 weeks each month resolving mismatches. Vendors face consistent late payments.

AI SOLUTION

3-Way Match Agent runs on every invoice within seconds of receipt. Mismatches are classified and routed to the right resolver with a pre-filled resolution form.

OUTCOME

Match exceptions resolved in <24 hours. On-time payment rate rises from 62% to 94%. Vendor satisfaction improves significantly.

↑ 94% On-Time Payment Rate

Vendor Complaints – No Communication

PAIN POINT

Vendors call finance 5–10 times per week asking about PO status, invoice processing, and payment dates. Team spends hours on vendor calls.

AI SOLUTION

Vendor Communication Agent sends proactive status updates at every milestone — PO issuance, GRN confirmation, invoice receipt, payment approval.

OUTCOME

Inbound vendor calls drop by 80%. Vendor portal self-service enabled. Vendor satisfaction scores rise substantially.

↓ 80% *Vendor Calls*

12 Specialised *AI Agents* Working in Concert

📁 Requisition Intelligence Agent

ROLE

Assists users in creating complete, accurate purchase requisitions

INPUTS

User request, budget data, GL codes, vendor catalogue

ACTIONS

Pre-fills ERP fields, validates data, flags policy violations before submission

↓ 80% PR creation time • ↑ Data accuracy

✅ Approval Follow-up Agent

ROLE

Ensures no approval request is ever ignored or forgotten

INPUTS

Pending approvals, SLA thresholds, escalation matrix

ACTIONS

Smart reminders, SLA escalation, delegation on absence

↓ 70% approval cycle time

🔍 Sourcing Agent

- ROLE
- Identifies the best vendors and manages the RFQ process end-to-end
- INPUTS
- Approved vendor list, category rules, historical performance data
- ACTIONS
- Shortlists vendors, issues RFQs, scores and compares all quotes received

↑ Best-value selection · Full audit trail

💬 Vendor Communication Agent

- ROLE
- Manages all vendor interactions proactively at every process milestone
- INPUTS
- PO status, GRN data, payment schedules, vendor preferences
- ACTIONS
- Sends POs, delivery reminders, payment confirmations, and queries

↓ 80% vendor calls · ↑ Vendor satisfaction

PO Creation Agent

ROLE

Creates accurate Purchase Orders the moment a PR is approved

INPUTS

Approved PR, selected vendor, agreed pricing, delivery terms

ACTIONS

Creates PO in ERP, routes for approval, issues to vendor automatically

Same-day PO issuance • Zero manual effort

Invoice Validation Agent

ROLE

Processes every invoice received — regardless of format or channel

INPUTS

Invoices via email, portal, PDF, EDI

ACTIONS

OCR extraction, field validation, duplicate check, ERP posting

↓ 85% processing effort • Zero duplicates

3-Way Match Agent

ROLE

Automatically matches PO, GRN, and Invoice for every single transaction

INPUTS

Purchase Order, Goods Receipt Note, Supplier Invoice

ACTIONS

Line-by-line match, tolerance checks, exception flagging

100% match coverage · Seconds per invoice

Exception Resolution Agent

ROLE

Ensures exceptions are routed, tracked, and resolved at speed

INPUTS

Exception type, transaction history, resolution rules

ACTIONS

Routes to right resolver, tracks resolution, escalates if stalled past SLA

↓ 60% exception resolution time

Payment Readiness Agent

ROLE

Ensures payments are only released when all conditions are fully met

INPUTS

Match status, approval chain, payment terms, cash position

ACTIONS

Validates readiness, triggers approval workflow, notifies vendor on payment

↑ On-time payment rate

What Gets *Better*, and By How Much

70%

Faster Procurement Cycles

End-to-end cycle time cut dramatically through automation and real-time approvals.

85%

Reduction in Manual Effort

Staff freed from repetitive tasks — redirected to strategic, high-value work.

40%

Invoice Processing Cost Reduction

Automated extraction, validation, and posting eliminate cost of manual handling.

100%

Audit Trail Coverage

Every action and decision is logged in real time. Board-ready reports on demand.

Approval SLAs enforced automatically. No more PRs or POs sitting unactioned in inboxes. Escalation is systematic, not dependent on individual initiative.

Improved Vendor Experience

Vendors receive proactive updates at every stage. Payment timelines are predictable. Disputes resolved faster — unlocking better pricing and terms.

Elimination of Maverick Spend

When approval delays no longer drive informal purchasing, maverick spend disappears. Every purchase flows through the approved channel — tracked and auditable.

Real-Time Spend Visibility

Live view of committed spend, open POs, pending invoices, and payment obligations — enabling better cash flow management and faster executive decisions.

Live in *Weeks*, Not Months

Our phased delivery model provides early value quickly, then expands progressively — minimising risk and maximising user adoption at every stage.

Phase 1

Discovery & Mapping

Week 1-2

Map your existing P2P process. Identify ERP configuration. Define business rules, approval policies, and agent parameters. Baseline current performance metrics.

Phase 2

ERP Integration

Week 3-5

Connect platform to your ERP, email, and document systems. Configure agent parameters. Test data flows and integration points end-to-end with real transactions.

Phase 3

Pilot Launch

Week 6-8

Go live with core agents on a pilot department. Refine rules based on real transactions. Train users. Measure and report early wins to stakeholders.

Phase 4

Full Rollout

Week 9-12

Expand to all departments and process stages. Activate all 12 agents. Enable executive dashboards. Transition to continuous improvement and optimisation mode.

No Business Disruption

Existing systems stay in place throughout the entire process

ROI Visible from Week 8

Early value delivery from pilot phase — measurable and reportable

Continuous Improvement

Agents learn and improve with every transaction cycle

Ready to *Transform* Your Procurement?

Start with a focused discovery session to assess your current P2P landscape and build a business case for agentic automation.

How We Get Started

Discovery Call

Assess your current P2P process, ERP environment, and key pain points.

Process Mapping

Document your current state and identify highest-value automation opportunities.

POC / Pilot Design

Define the scope of an initial pilot — typically one process stage or department.

Business Case Build

Quantify expected ROI, effort reduction, and payback period for executive sign-off.

PLATFORM TAGLINE

"Governance. Procurement. Compliance. Unified by Intelligence."

Key Platform Guarantees

- ✓ No rip-and-replace — works with your existing ERP
- ✓ Live in weeks, not months
- ✓ 100% audit trail on every AI action
- ✓ Humans retain control at every decision point
- ✓ ROI visible from Week 8
- ✓ Transparent SaaS pricing — no hidden services
